PRESCHOOL MATH ONLINE CLASS (3 clock hours)

CLASS DESCRIPTION: This training is designed to guide teachers and child care providers in implementing math curricular activities and learning in the preschool program. You do not have to have a degree in physics to help young children in your early childhood program learn about math. The rudiments of a math curriculum start with the child and the world around them. This online workshop lesson will guide you in helping children learn about math as they explore and discover and have fun!

LEARNING OBJECTIVES: As a result of this training, participants will be able to:

- Identify the sequence of development of math concepts
- Identify main math skills and concepts
- Give examples of both planned and incidental math learning experiences
- List appropriate materials for a math discovery classroom area

WHAT OTHERS ARE SAYING:

The cookie sheet activities and the math manipulatives will give me fun and easy ways to introduce math to the children.

– Traci D., ID

I found new ways to incorporate math into my old ways...I am able to mix it up and make it more fun and playful.

– Lesley P., NV

I liked the top ten list of math manipulatives. I liked watching the YouTube™ videos as well as the description (reminder) of how math concepts are part of the activities which are presently engaging to my children in numerous ways.

– Cristy H., Canada

I found all the articles very useful. I did not realize how many different activities, games and materials there are for preschool children. Thank you very much. This class was great.

– Patricia C., FL
